

Tips and Hints

- ✓ Check that doors and windows are locked before arming your security system.
- ✗ Don't leave animals in protected areas as they will trigger the alarm (unless provision has been made for pets).
- ✓ Clean dust and cob webs away from detectors often.
- ✗ Don't cover or block your detectors.
- ✓ Leave internal doors open to maximise the area your detector covers.
- ✗ Don't leave windows open on windy days as air currents cause false alarms.
- ✓ Spray some surface insecticide around your detectors (not on them) to prevent spiders etc. from crawling on or in detectors causing false alarms.
- ✗ Never set your alarm off 'to check the response' as this will effect the response of subsequent alarms.
